

JMeter

How to Download and Install JMeter?

There is just one prerequisite for downloading and installing JMeter: to have Java installed in your system.

1. Check if Java Is Installed

- Open the command prompt
- Put the command `java -version`

If you have Java installed in your system, the command will show the version of Java installed, else, before going forward with the installation of JMeter, you must install Java.

<https://www.oracle.com/in/java/technologies/downloads/>

2. Download JMeter

- To download JMeter go to the Apache JMeter website
https://jmeter.apache.org/download_jmeter.cgi
- On the website go to the binaries section and download the zip file
- Wait for the zip folder to be downloaded

3. Install JMeter

- Once the zip folder is downloaded, go to the folder location, and then extract the zip folder
- Once the folder is extracted go inside that folder and then go inside the bin folder here
- In the bin folder open the `jmeter.bat` file

It will take a while to open, and this is how you can download and install JMeter onto your system. Now when you have installed JMeter, you can execute a test for the same.

4. Create the First Test Plan

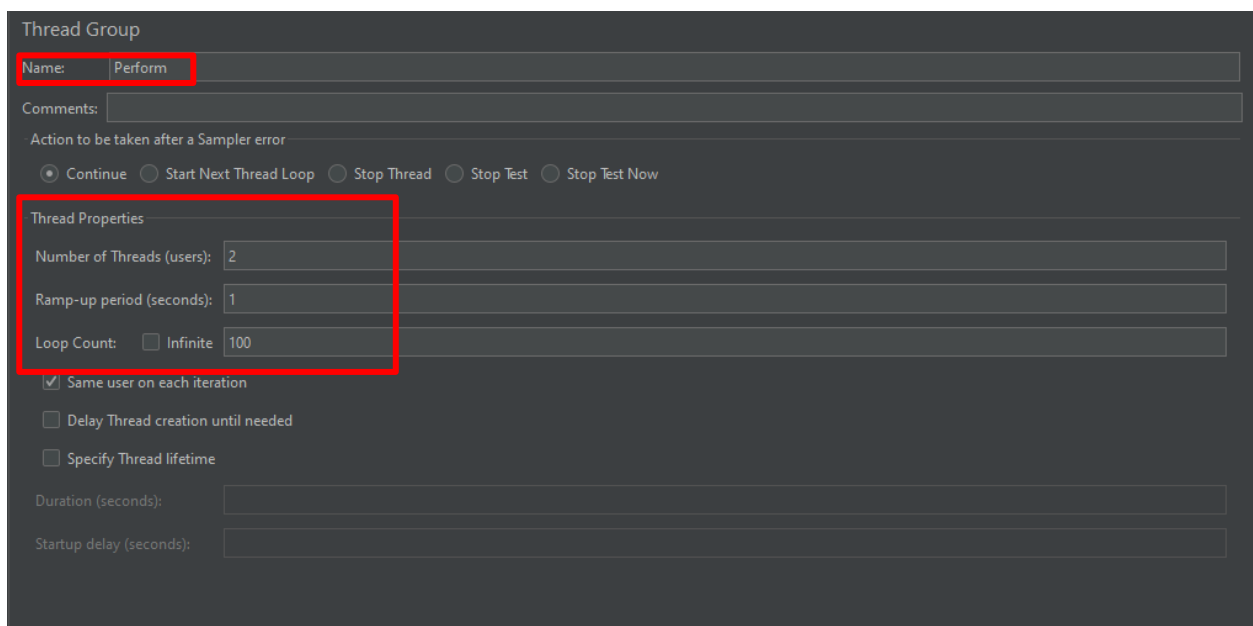

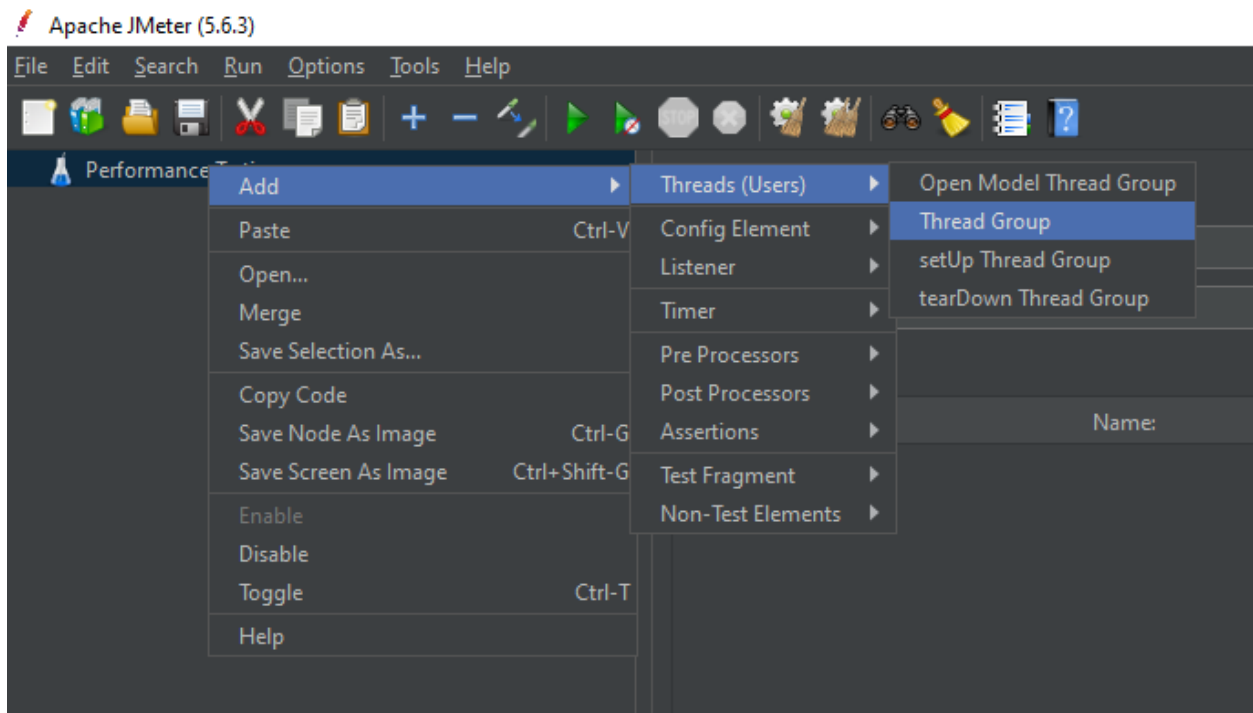

The first step in creating the test plan is

- Open the JMeter window
- Rename the test plan and save it

Performance Testing

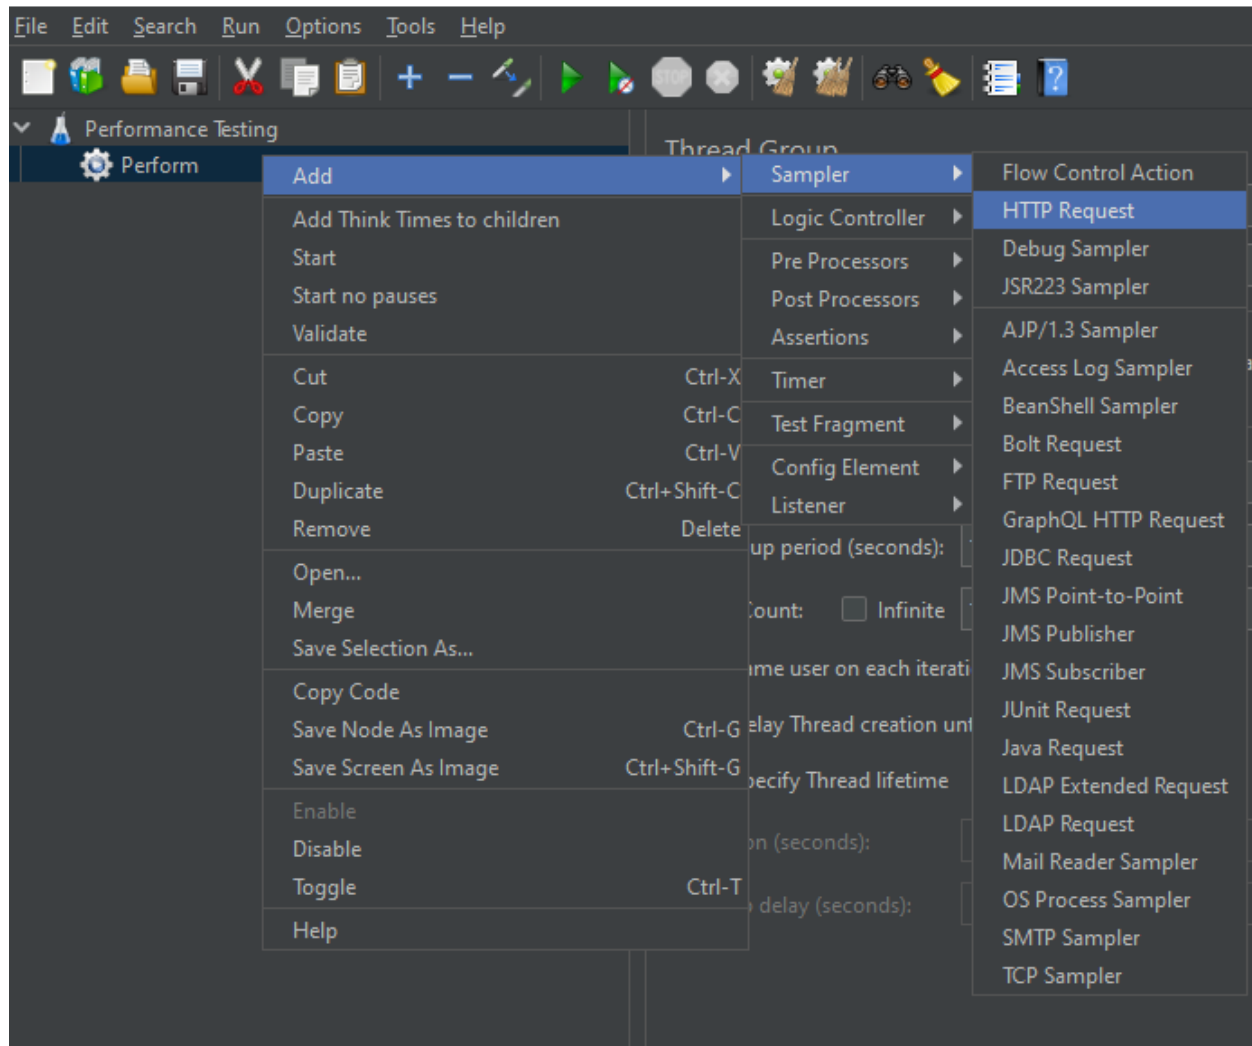

Adding a Thread Group

- Right-click on the test plan.
- Go to add -> Threads (Users) -> Thread Group

Add an HTTP Request

- Right-click on FirstJMeter
- Add > Sampler > HTTP Request

Now, rename it to be Homepages.

Here, in the Server Name or IP box, you have to give the server's name or the IP.

Let's pick up a website; for now, take Simplilearn's website.

- Copy the URL
- Come back to the JMeter window and paste it into the Server Name box.

Don't give HTTP or HTTPS since these are protocols that will come in the other box. They will be automatically taken in the HTTP request case.

Then in the path dialog box, leave a forward slash there.

HTTP Request

Name:

Comments:

Basic Advanced

Web Server

Protocol [http]: Server Name or IP: Port Number:

HTTP Request

GET Content encoding:

☐ Redirect Automatically ☒ Follow Redirects ☒ Use KeepAlive ☐ Use multipart/form-data ☐ Browser-compatible headers

Parameters Body Data Files Upload

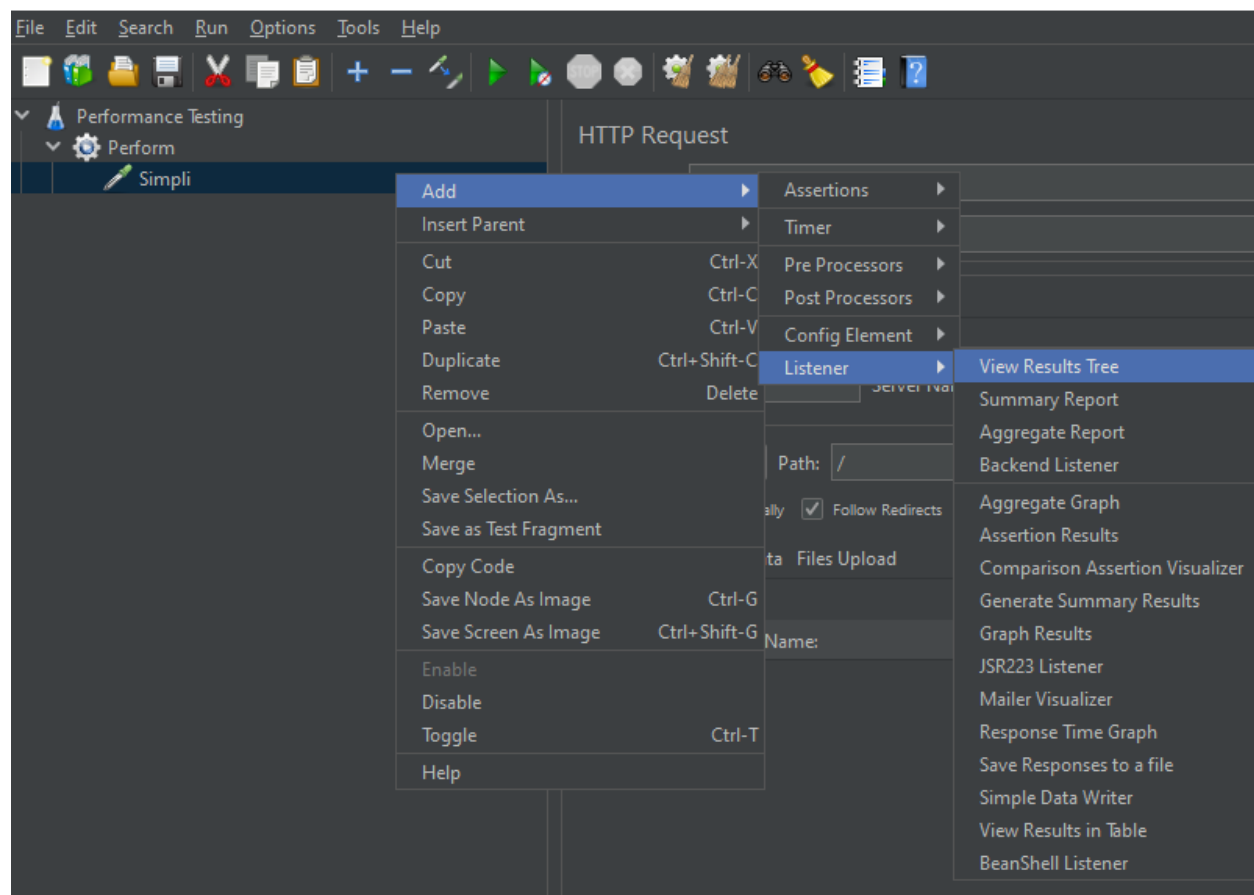

Send Parameters With the Request:

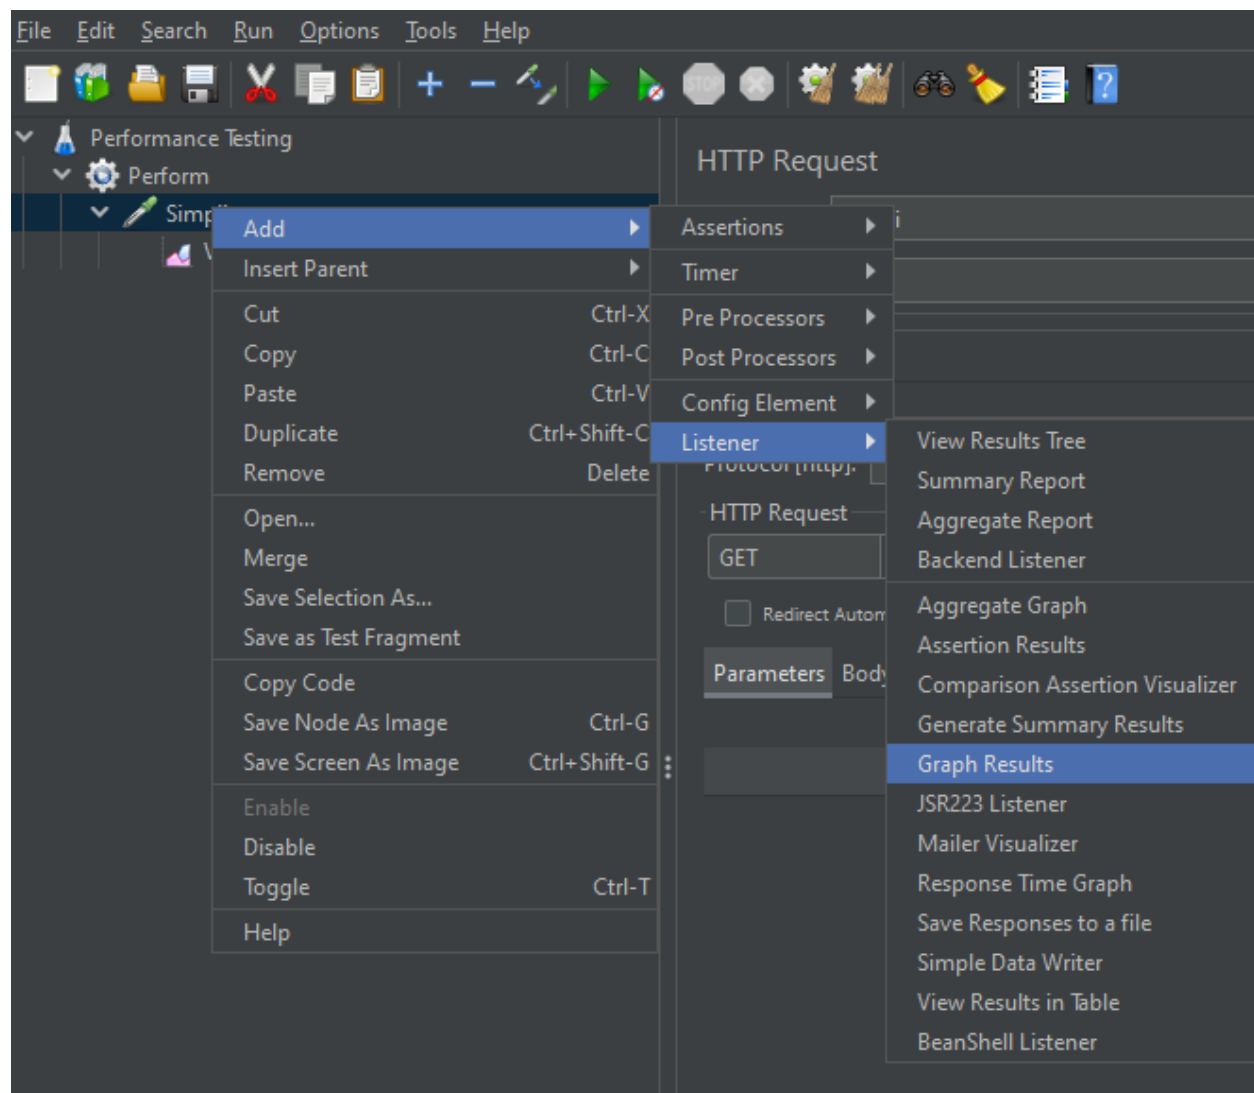

Name:	Value	URL Encode?	Content-Type	Include Equals?
-------	-------	-------------	--------------	-----------------

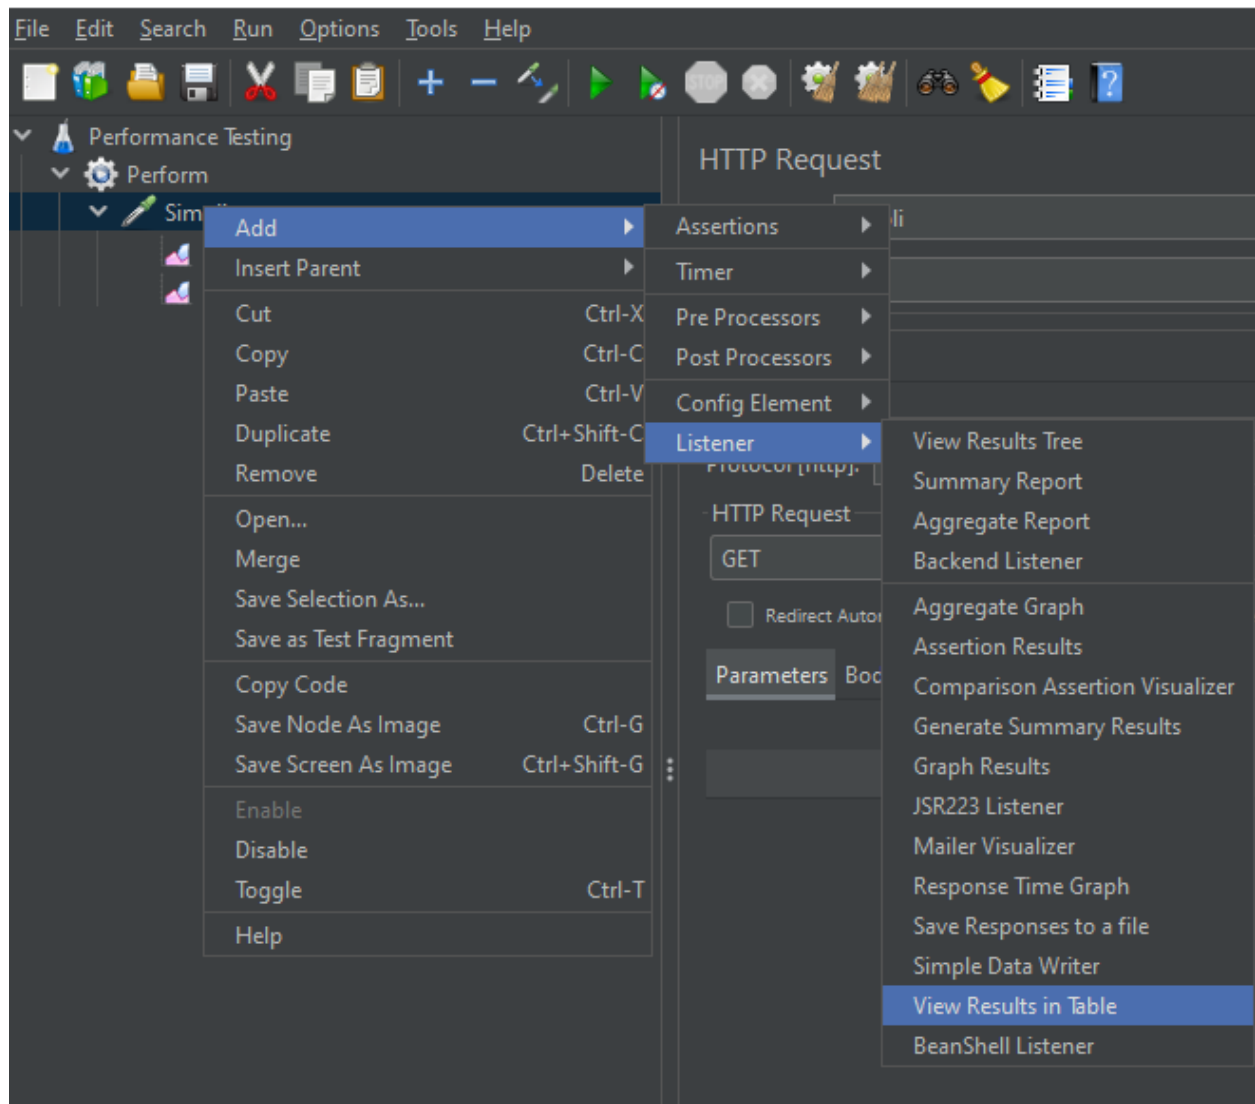

Add Listeners

To determine what the results of the test will be, you need to add some more test elements.

- Right-click on FirstJMeter
- Go to listener options
- (View Results Tree/ Graph Results/ View results in table)

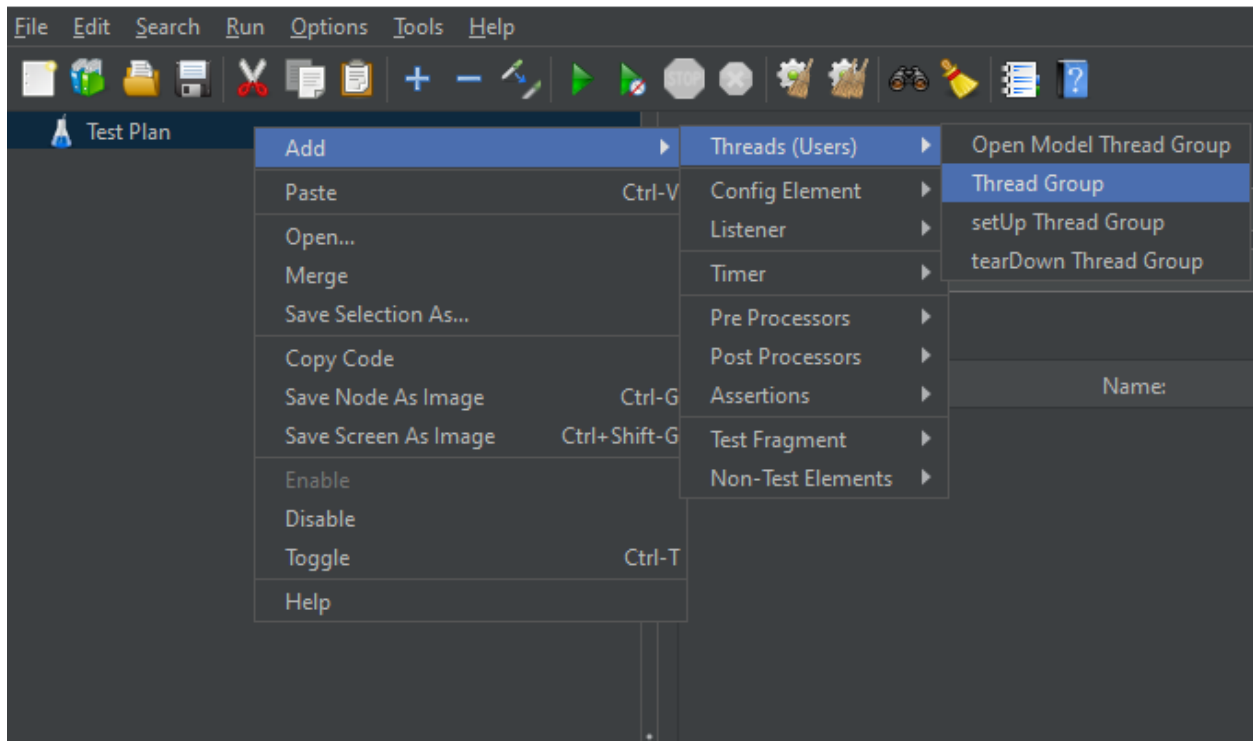

Run the test

- Now, save the test and run it
- For running the test, click the green button

Load Testing

Adding a Thread Group

- Right-click on the test plan.
- Go to add -> Threads (Users) -> Thread Group

Thread Group

Name:

Comments:

Action to be taken after a Sampler error

☒ Continue ☐ Start Next Thread Loop ☐ Stop Thread ☐ Stop Test ☐ Stop Test Now

Thread Properties

Number of Threads (users):

Ramp-up period (seconds):

Loop Count: ☐ Infinite

☒ Same user on each iteration

☐ Delay Thread creation until needed

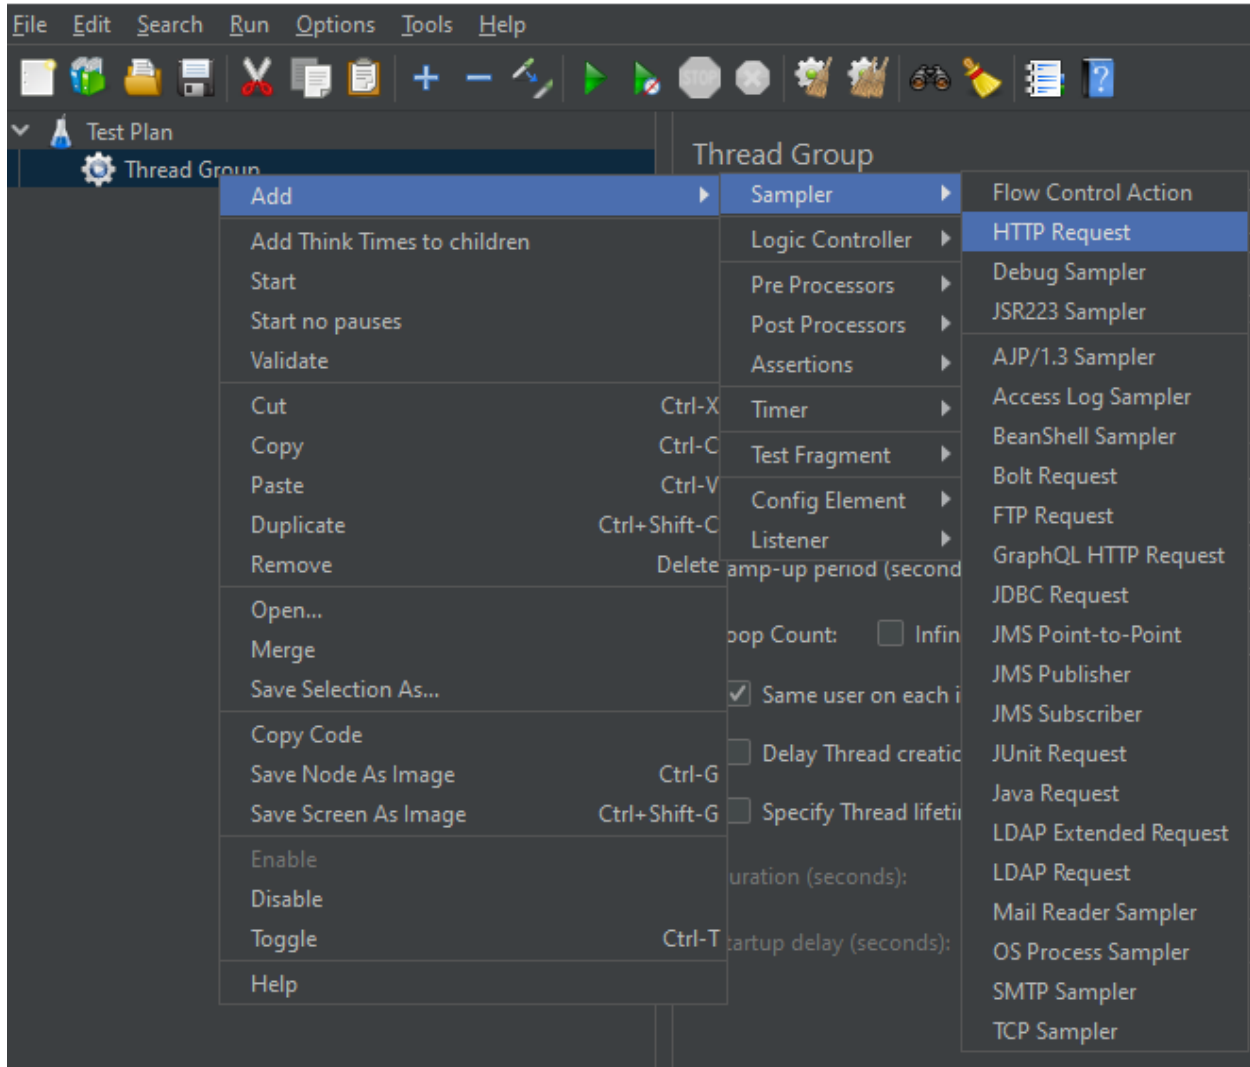

☐ Specify Thread lifetime

Duration (seconds):

Startup delay (seconds):

Add 3 HTTP Request

- Right-click on FirstJMeter
- Add > Sampler > HTTP Request

Now, rename it to be Homepages.

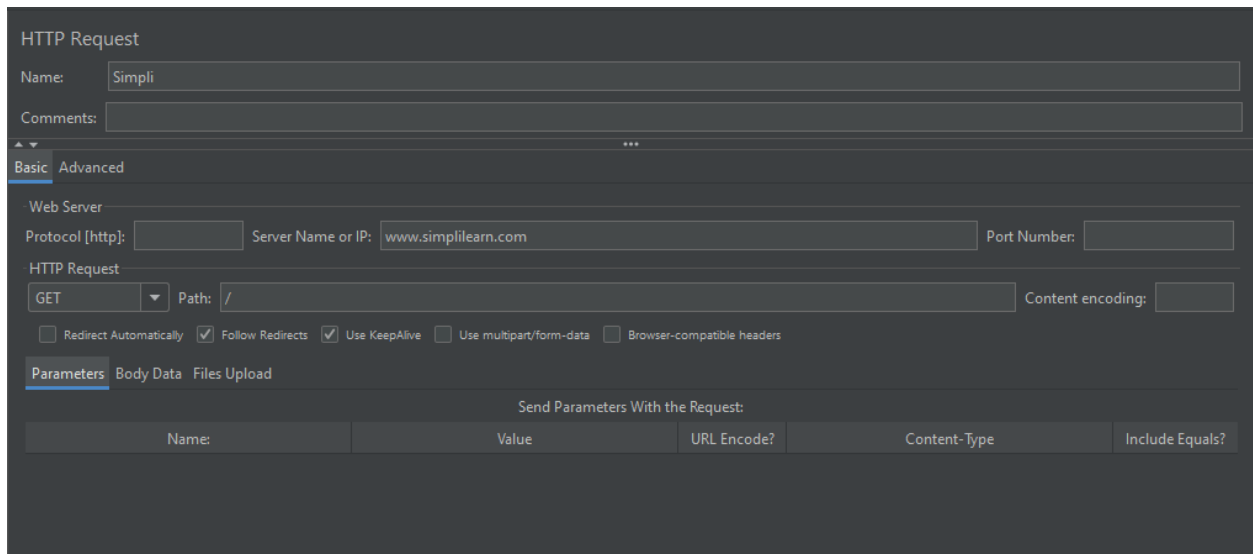

Here, in the Server Name or IP box, you have to give the server's name or the IP.

Let's pick up a website; for now, take Simplilearn's website.

- Copy the URL
- Come back to the JMeter window and paste it into the Server Name box.

Don't give HTTP or HTTPS since these are protocols that will come in the other box. They will be automatically taken in the HTTP request case.

Then in the path dialog box, leave a forward slash there.

Add Listeners

To determine what the results of the test will be, you need to add some more test elements.

- Right-click on FirstJMeter
- Go to listener options

(View Results Tree)

Run the test

- Now, save the test and run it
- For running the test, click the green button
- After running, Remove the “View Results Tree”
- Open the command prompt

API Testing

API Testing: GET METHOD

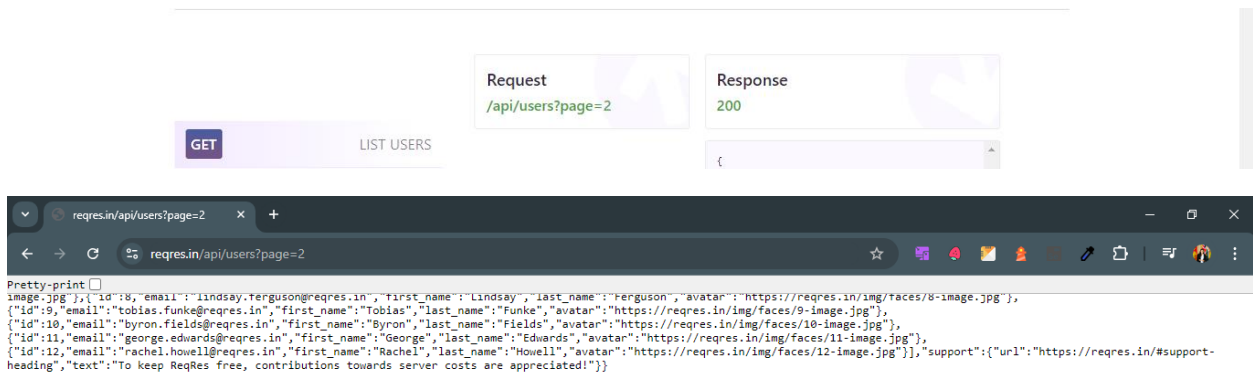

Open Apache Jmeter

Adding a Thread Group

- Right-click on the test plan.
- Go to add -> Threads (Users) -> Thread Group

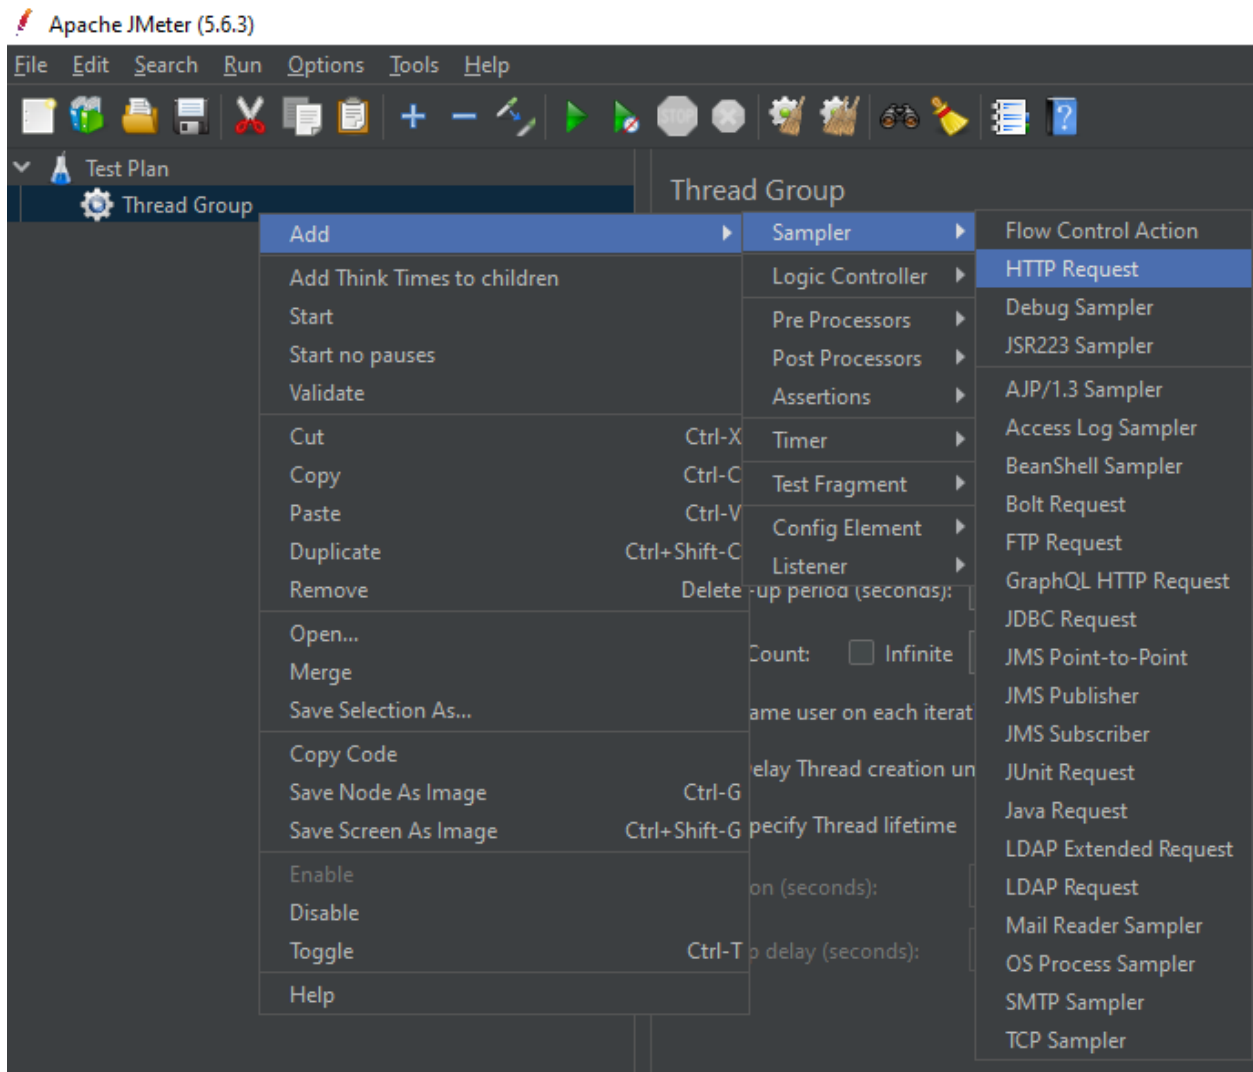

Sample API for testing : <https://reqres.in/>

Copy the link

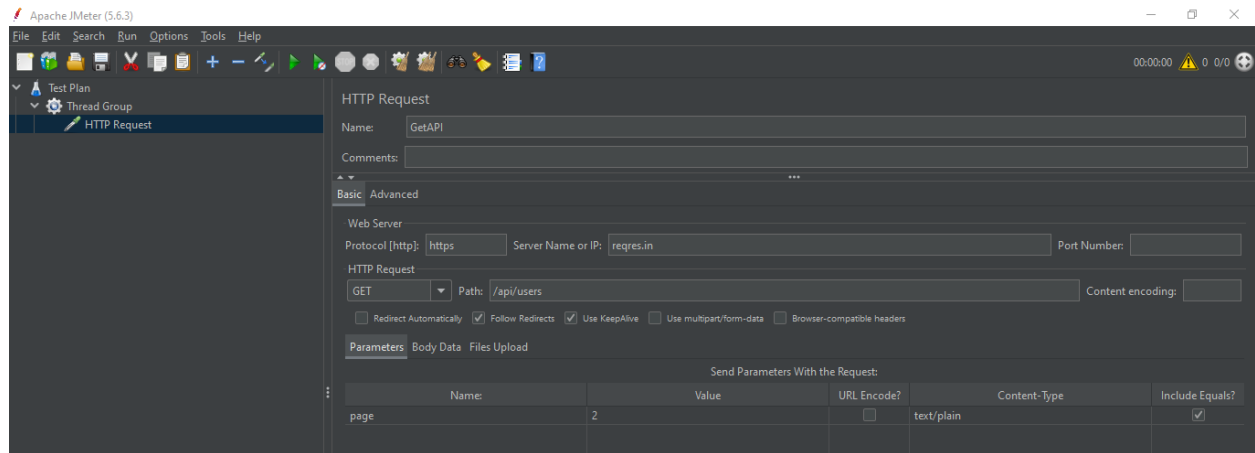

Add an HTTP Request

- Right-click on FirstJMeter
- Add > Sampler > HTTP Request

Paste the link as given below

Protocol/ Server Name or IP/ Path/ Parameters → HTTP Request= GET

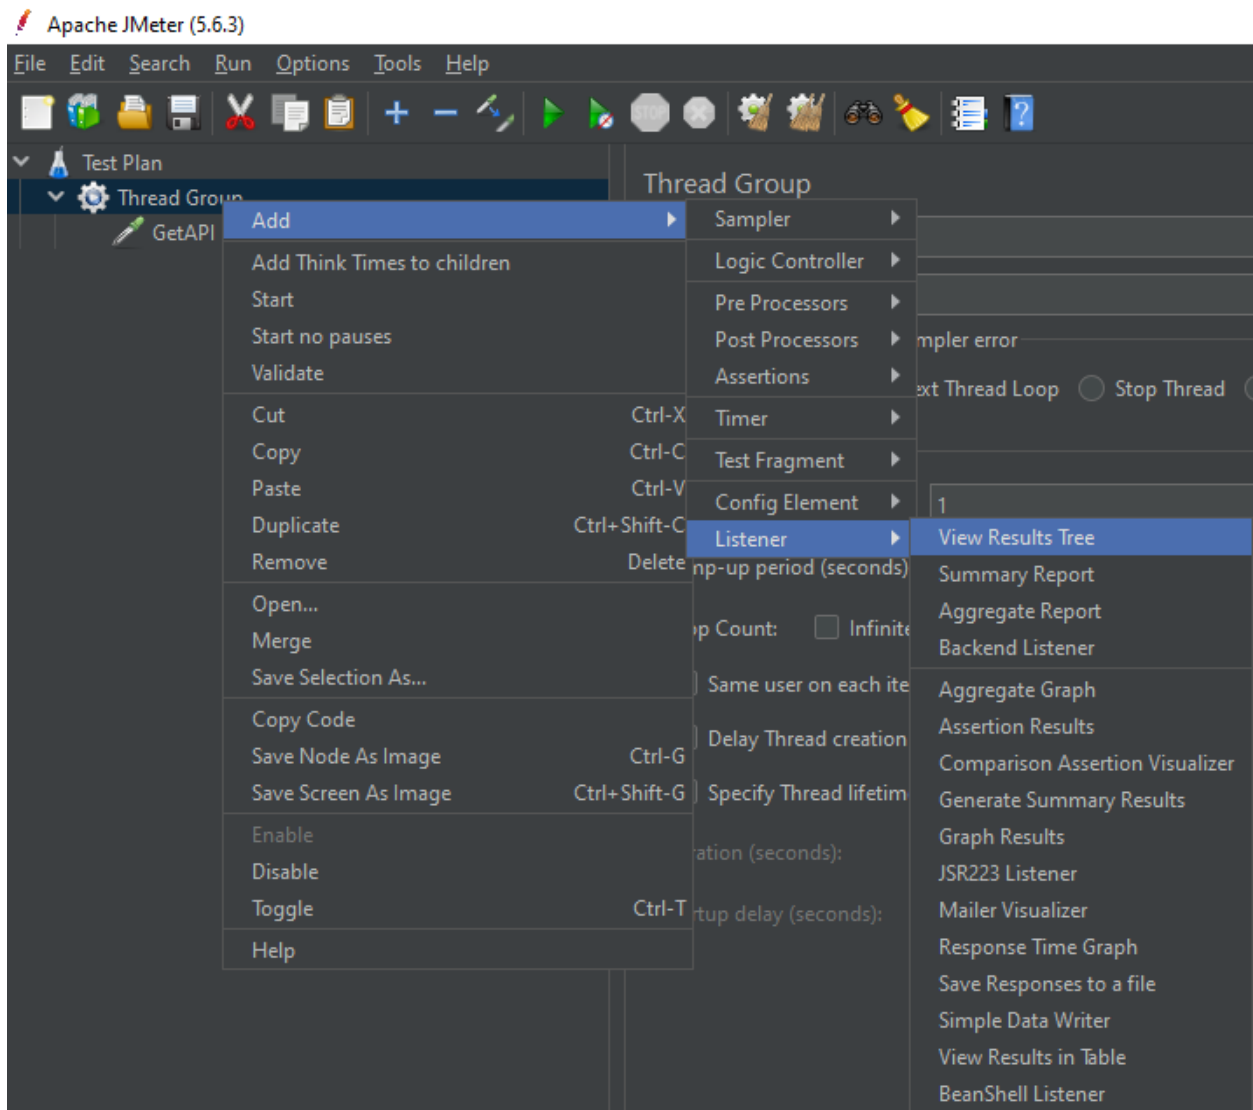

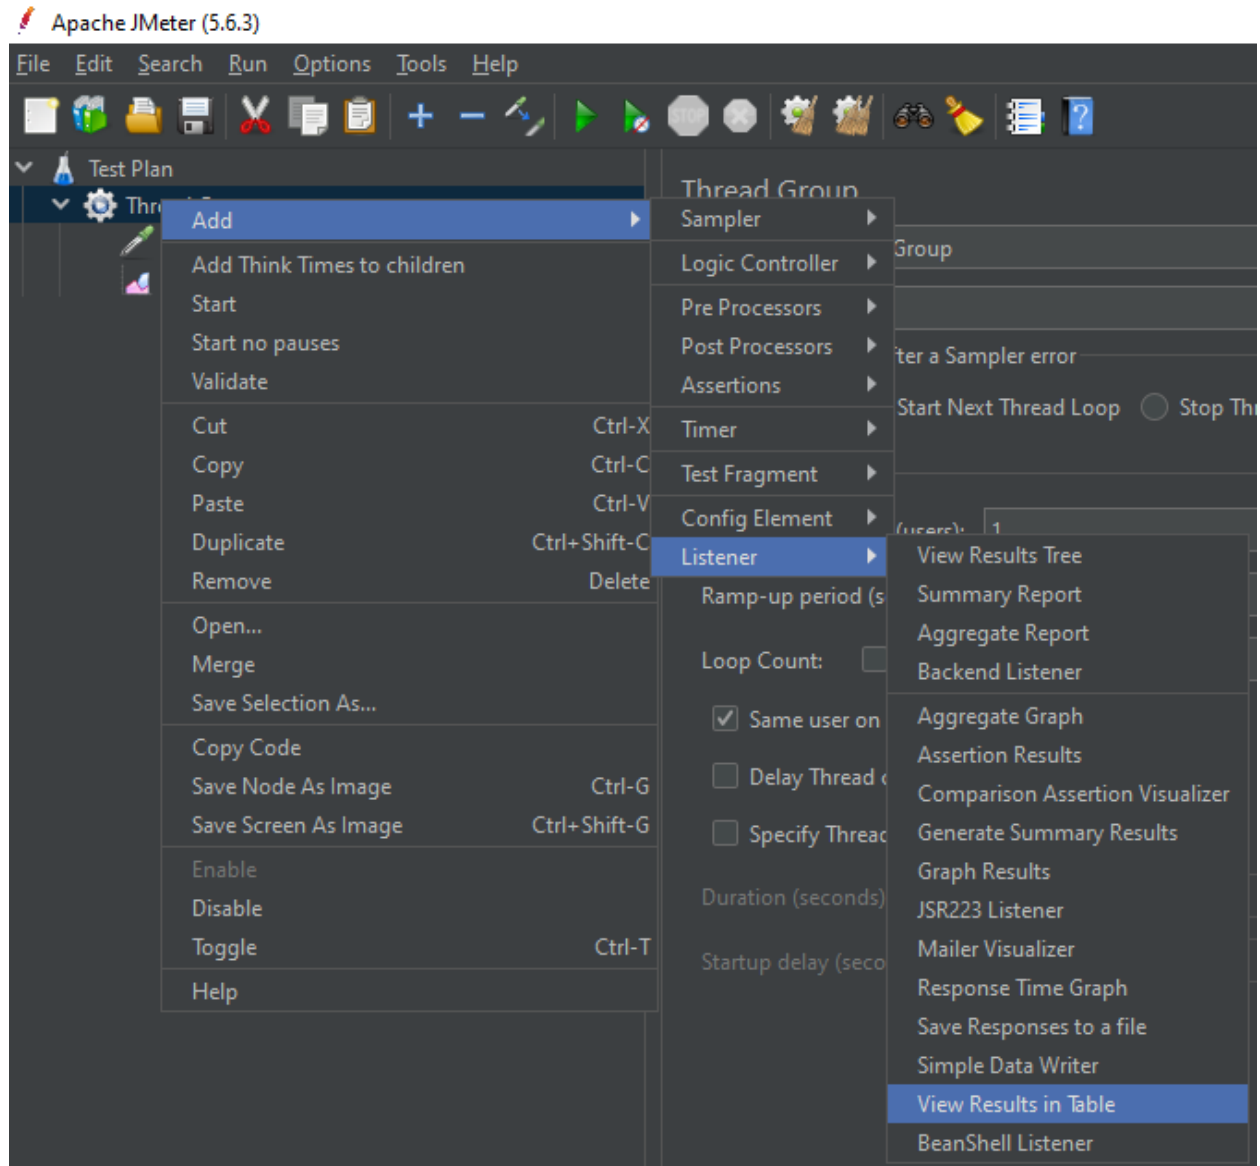

Add Listeners

To determine what the results of the test will be, you need to add some more test elements.

- Right-click on FirstJMeter
- Go to listener options

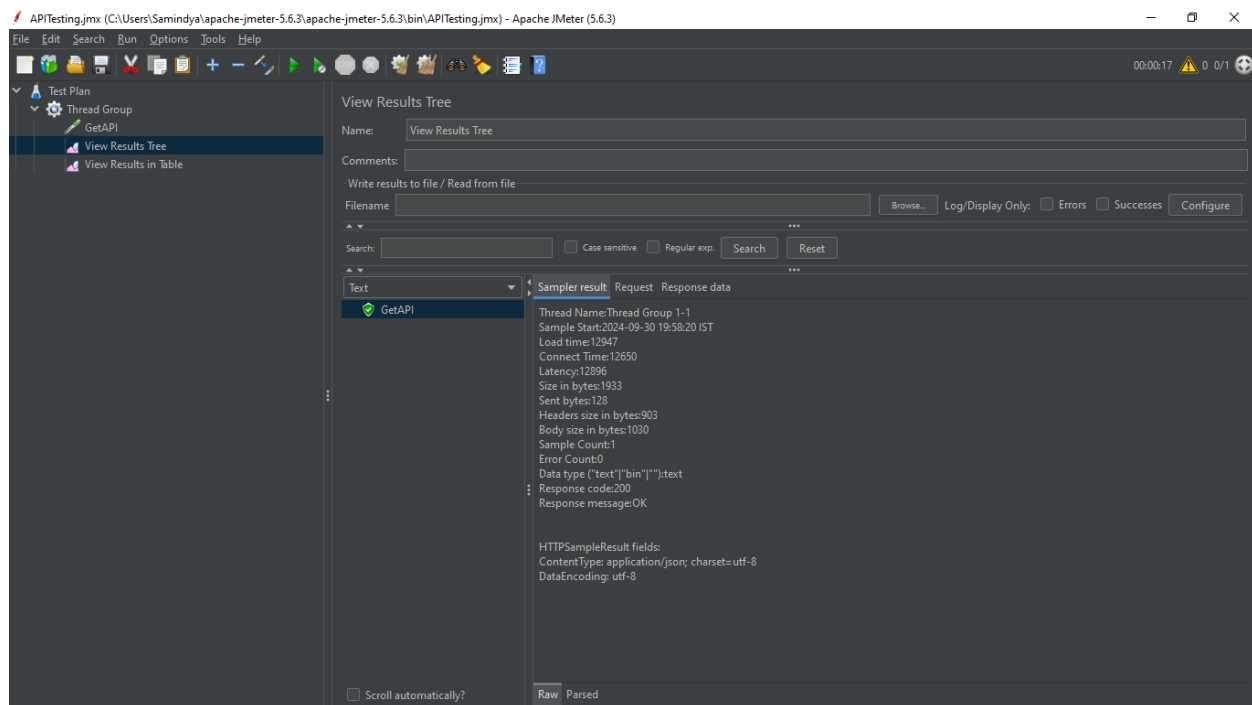

(View Results Tree/View Results in Table)

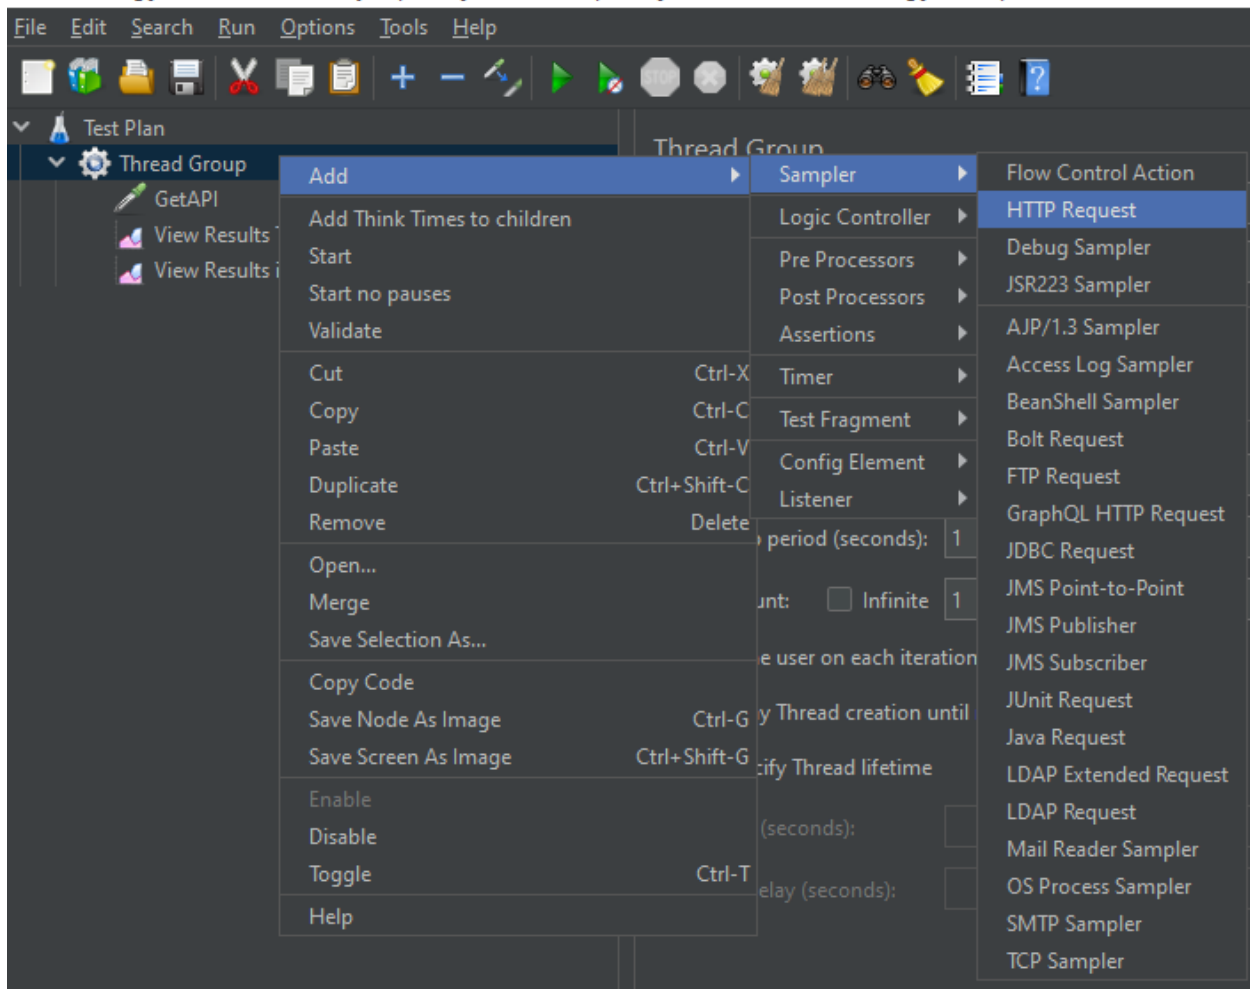

Run the test

- Now, save the test and run it
- For running the test, click the green button

API Testing: POST METHOD

APITesting.jmx (C:\Users\Samindya\apache-jmeter-5.6.3\apache-jmeter-5.6.3\bin\APITesting.jmx) - Apache JMeter (5.6.3)
